

### COVID-19 Update June 09, 2022

As of **June 08, 2022**, the total of laboratory-confirmed and probable COVID-19 cases reported among Connecticut residents is **815,660**; **3,296** have been reported in the past 7 days. **Two hundred eighty-two** patients are currently hospitalized with laboratory-confirmed COVID-19; of these, **77** (27.3%) are not fully vaccinated.

Overall Summary	Cumulative (except for hospital census)	Past 7 days*
Positive PCR/NAAT Tests	884,033	3,219
All PCR/NAAT Tests	14,613,247	36,518
Test Positivity (pos/all PCR/NAAT)		8.81%
Patients currently hospitalized with COVID-19	282	-29
COVID-19-Associated Deaths	10,999	+27

\*This column indicates all PCR/NAAT tests by specimen collection date from the past 7 days. Test positivity is calculated as a rolling 7-day test positivity by specimen collection date; all positive molecular (PCR/NAAT) test results are divided by all molecular (PCR/NAAT) test results (positive and negative) for the last 7 days and multiplied by 100 to reach a percentage. Hospitalizations over the past 7 days indicates the change in the number of patients hospitalized with COVID-19 over that period. Deaths over the past 7 days indicates the number of new COVID-19 associated deaths reported; deaths are reported once weekly.

As of April 4th 2022, negative rapid antigen and rapid PCR test results for SARS-CoV-2 are no longer required to be reported to the Connecticut Department of Public Health. Negative test results from laboratory based molecular (PCR/NAAT) results are still required to be reported as are all positive test results from both molecular (PCR/NAAT) and antigen tests. Both positive molecular (PCR/NAAT) and antigen tests will continue to be used for determining case status.

**COVID-19 Cases and Associated Deaths by County of Residence As of 06/08/22.**

County	COVID-19 Cases		COVID-19-Associated Deaths	
	Confirmed	Probable	Confirmed	Probable
Fairfield County	199,487	23,822	2,213	531
Hartford County	177,822	19,270	2,594	584
Litchfield County	30,144	4,752	401	63
Middlesex County	29,295	2,893	348	138
New Haven County	189,405	24,483	2,474	388
New London County	55,616	5,279	524	151
Tolland County	20,794	2,396	202	78
Windham County	25,971	1,663	243	65
Pending address validation	2,242	326	0	2
<b>Total</b>	<b>730776</b>	<b>84884</b>	<b>8999</b>	<b>2000</b>

[National COVID-19 statistics](#) and information about [preventing spread of COVID-19](#) are available from the Centers for Disease Control and Prevention.

**Day-to-day changes reflect newly reported cases, deaths, and tests that occurred over the last several days to week.** All data in this report are preliminary; data for previous dates will be updated as new reports are received and data errors are corrected. Hospitalization data were collected by the Connecticut Hospital Association. Deaths reported to either OCME or DPH are included in the daily COVID-19 update.

## COVID-19 Cases and Deaths Over Time

The chart below shows the number of new COVID-19 cases reported to CT DPH by week of specimen collection or onset of illness. Case data includes probable cases based on positive antigen test results. During the past two weeks (May 22 - June 04), there were 12,072 new COVID-19 cases, including cases among people residing in the community and congregate settings, such as nursing homes, managed residential communities, and correctional facilities.

The graph below shows the number of COVID-19 associated deaths since August 1, 2020 by week of death and whether the person was residing in a congregate setting, such as a nursing home, managed residential community, or correctional facility.

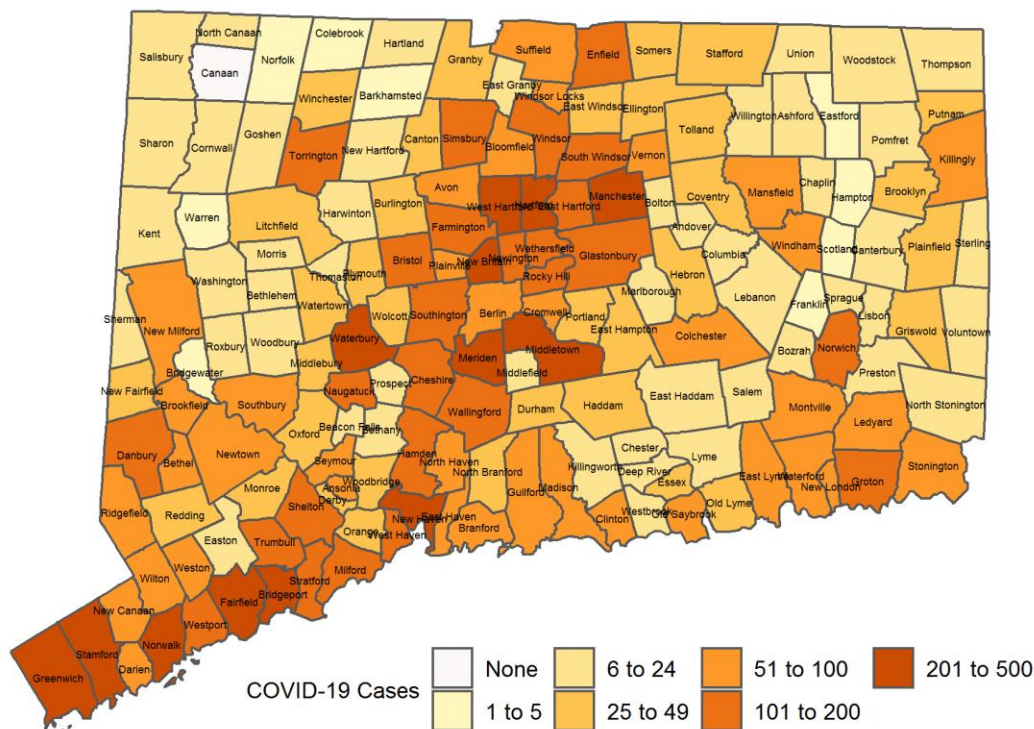

## Community Transmission of COVID-19

Among 12,072 new COVID-19 cases with specimen collection or onset date during May 22 - June 04, there were 12,050 cases among people living in community settings, as shown in the map below. This corresponds to an average of 23.87 new COVID-19 cases per day per 100,000 population. Cases among people residing in nursing homes, assisted living facilities, and correctional facilities are excluded. Darker colors indicate towns with more cases.

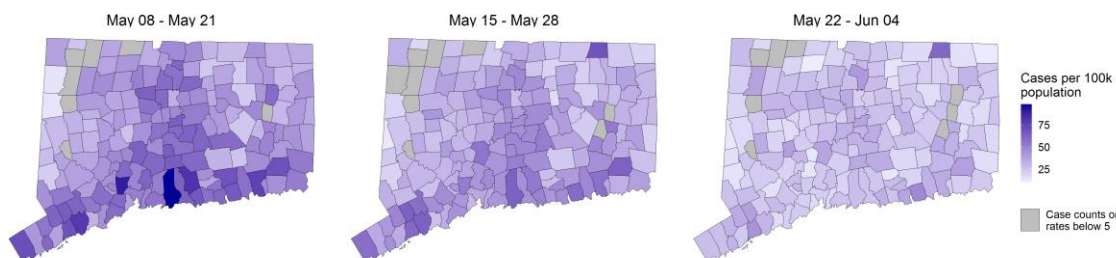

During this two-week period, there were more than 100 new COVID-19 cases in 39 towns.

Number of COVID-19 Cases among People Living in Community Settings by Town with Specimen Collection or Onset Date During May 22 - June 04

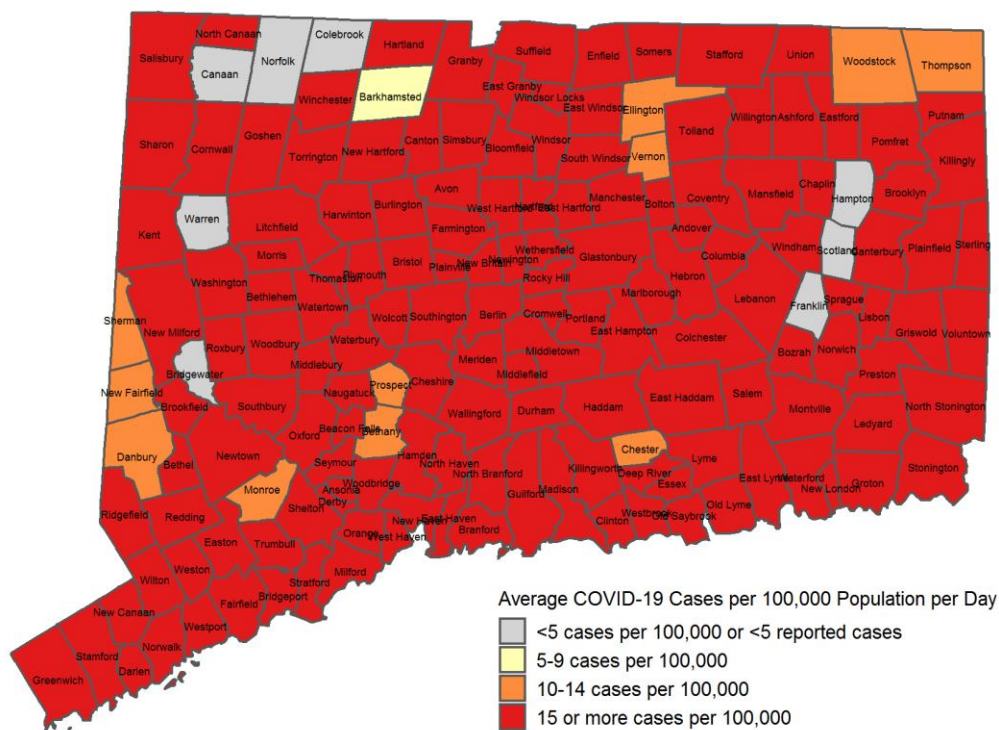

*Map does not include 49 cases pending address validation*

Because towns with larger populations are likely to have more cases, it is also important to look at the number of new cases per 100,000 population. The maps below show the average number of new cases per 100,000 population per day, with darker colors indicating higher rates. Cases among people residing in nursing homes, assisted living facilities, and correctional facilities are excluded.

Among towns with at least 5 new cases during May 22 - June 04, 149 towns had an average rate of 15 or more cases per 100,000 population per day, shown in red in the map below.

Average Daily Rate of COVID-19 Cases among People Living in Community Settings per 100,000 Population by Town with Specimen Collection or Onset Date During May 22 - June 04

Map does not include 49 cases pending address validation

## Epidemiology of COVID-19 by Vaccine Status

### Methodology

To determine cases of COVID-19 among fully vaccinated persons or among those who have received an additional dose of COVID-19 vaccine, DPH matches COVID-19 case data with the vaccine registry to determine which cases meet the definition of being fully vaccinated or having received an additional dose and which are also vaccine breakthrough cases.

- A case of COVID-19 in a fully vaccinated person (e.g., vaccine breakthrough case) is defined as a person who has a positive PCR/NAAT or antigen test in a respiratory specimen collected  $\geq 14$  days after completing the final dose of an FDA-authorized or approved COVID-19 vaccine series and who did not have a previously positive COVID-19 test  $< 90$  days prior to the positive test currently under investigation.
- A case of COVID-19 in a fully vaccinated person who has received an additional dose is defined as a person who has a positive PCR/NAAT or antigen test in a respiratory specimen collected  $\geq 14$  days after receiving an additional dose of any COVID-19 vaccine and who did not have a previously positive COVID-19 test  $< 90$  days prior to the positive test currently under investigation.

All data presented below are preliminary and subject to change.

### Data

The table below shows new COVID-19 cases for the last two complete weeks (Sun-Sat) May 22, 2022 - June 04, 2022 by vaccination status. The percentage of cases among fully vaccinated individuals is influenced by the high proportion of the population that is eligible for and has completed a vaccine series, and should be considered in light of the overall proportion of vaccinated individuals who have contracted the virus.

Status	Case Count	Percent
New Cases	11,523	
Not Fully Vaccinated	3,518	30.5
Fully Vaccinated	8,005	69.5

As of **June 08, 2022**, 231,997 cases of COVID-19 among fully vaccinated persons in Connecticut have been identified. Those 231,997 cases account for 8.49 percent of the 2,731,409 persons who are fully vaccinated.

Since the beginning of the pandemic, 583,663 cases have been identified among individuals who are not fully vaccinated.

Nine hundred seventy COVID-19 related deaths have occurred among the 231,997 fully vaccinated persons confirmed with COVID-19.

The table below shows cases and deaths among fully vaccinated persons, and among persons who have received an additional dose, by age group. As shown below, persons who have received an additional dose are a subset of those cases that are fully vaccinated.

**Cases and Deaths Among Fully Vaccinated Persons and Persons with Additional Doses by Age Group**

Age groups	# (%) Cases	# (%) Additional Dose Cases	# (%) Deaths	# (%) Additional Dose Deaths
5-11	6,071 (2.6%)	7 (0%)		
12-15	9,256 (4%)	617 (0.8%)		
16-24	30,682 (13.2%)	6,017 (8.1%)	1 (0.1%)	
25-34	38,227 (16.5%)	9,694 (13%)	3 (0.3%)	
35-44	39,154 (16.9%)	11,883 (16%)	11 (1.1%)	1 (0.4%)
45-54	37,596 (16.2%)	12,650 (17%)	24 (2.5%)	5 (2.2%)
55-64	36,172 (15.6%)	14,879 (20%)	114 (11.8%)	21 (9.1%)
65-74	20,018 (8.6%)	10,893 (14.6%)	168 (17.3%)	41 (17.7%)
75+	14,821 (6.4%)	7,783 (10.5%)	649 (66.9%)	164 (70.7%)
Total	231,997	74,423	970	232

## SARS-CoV-2 Variant Surveillance

The Centers for Disease Control and Prevention (CDC) have identified three types of SARS-CoV-2 variants: variants of concern, variants being monitored, and variants of high consequence. The definitions for the three different variant categories and substitutions of therapeutic concern can be found here: [SARS-CoV-2 Variants of Concern | CDC](#).

Different terminology has been developed by international scientists for naming SARS-CoV-2 variants. Recently, the World Health Organization (WHO) developed new labels for describing these variants to the public. Below, the WHO label are listed for each variant described.

Below are data on variants of concern and variants being monitored identified among Connecticut residents. No variants of high consequence have been defined by CDC to date.

Data presented are based on variant data reported directly to DPH and include data since January 2021-present.

Data below represent sequences that have been reported to DPH as of 06/08/2022 with specimen collection dates between 01/12/2021 and 05/28/2022. **The total number of SARS-CoV-2 sequences reported to DPH with a valid specimen collection date is 37933.** Data are preliminary and updated as new data are received.

Variant	Number	Percentage
<b>Variants of Concern</b>		
Omicron	16,666	43.94
<b>Variants Being Monitored</b>		
Alpha	2,525	6.66
Beta	23	0.06
Gamma	137	0.36
Delta	16,287	42.94
Epsilon	60	0.16
Zeta	1	0.00
Eta	10	0.03
Iota	718	1.89
Kappa	2	0.01
B.1.617.3	0	0.00
Mu	84	0.22

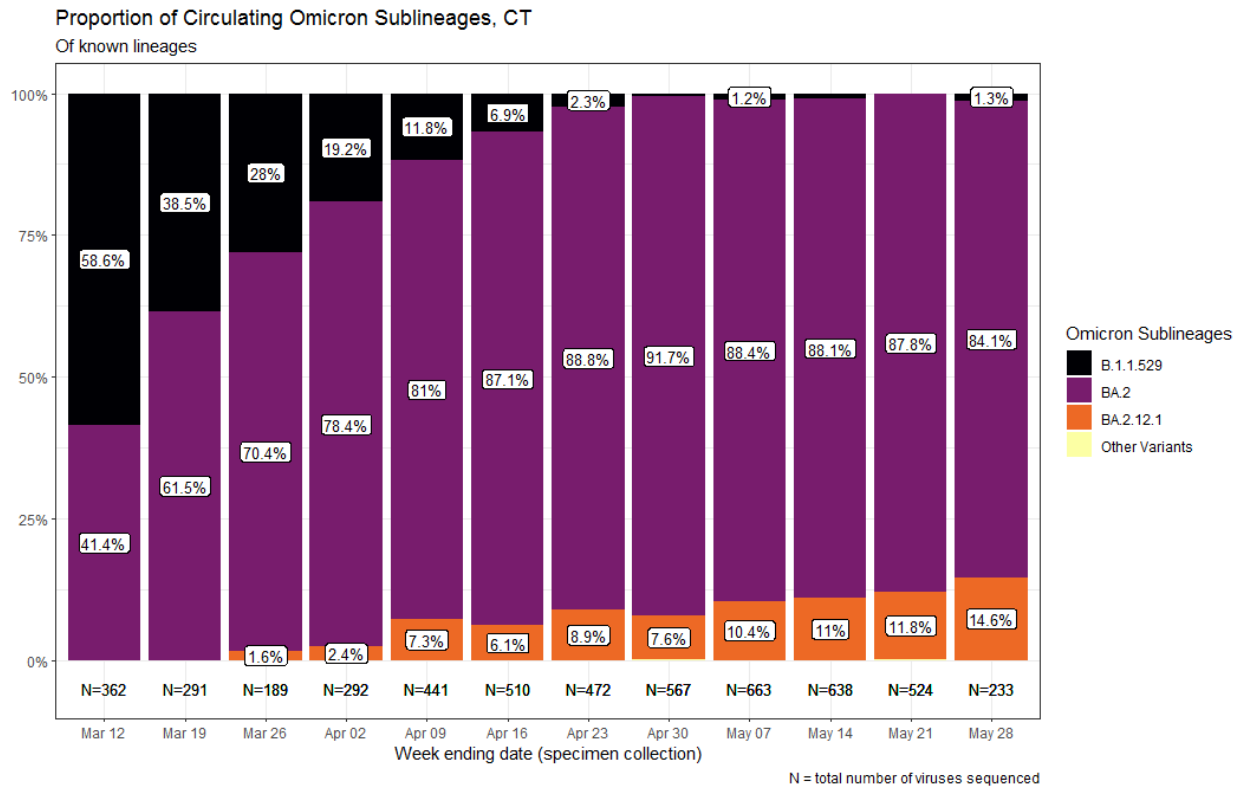

## SARS-CoV-2 Variant Surveillance, continued

The figure below shows the change in proportion of circulating variants of concern by week reported to DPH through June 08, 2022. Variants identified as Omicron are shown by sublineage and all other variants are included as “Other Variants”. Data include sequences from specimens with dates of collection from 03/06/2022–05/28/2022.

As of May 19, 2022, the plot below has been updated to reflect the following changes:

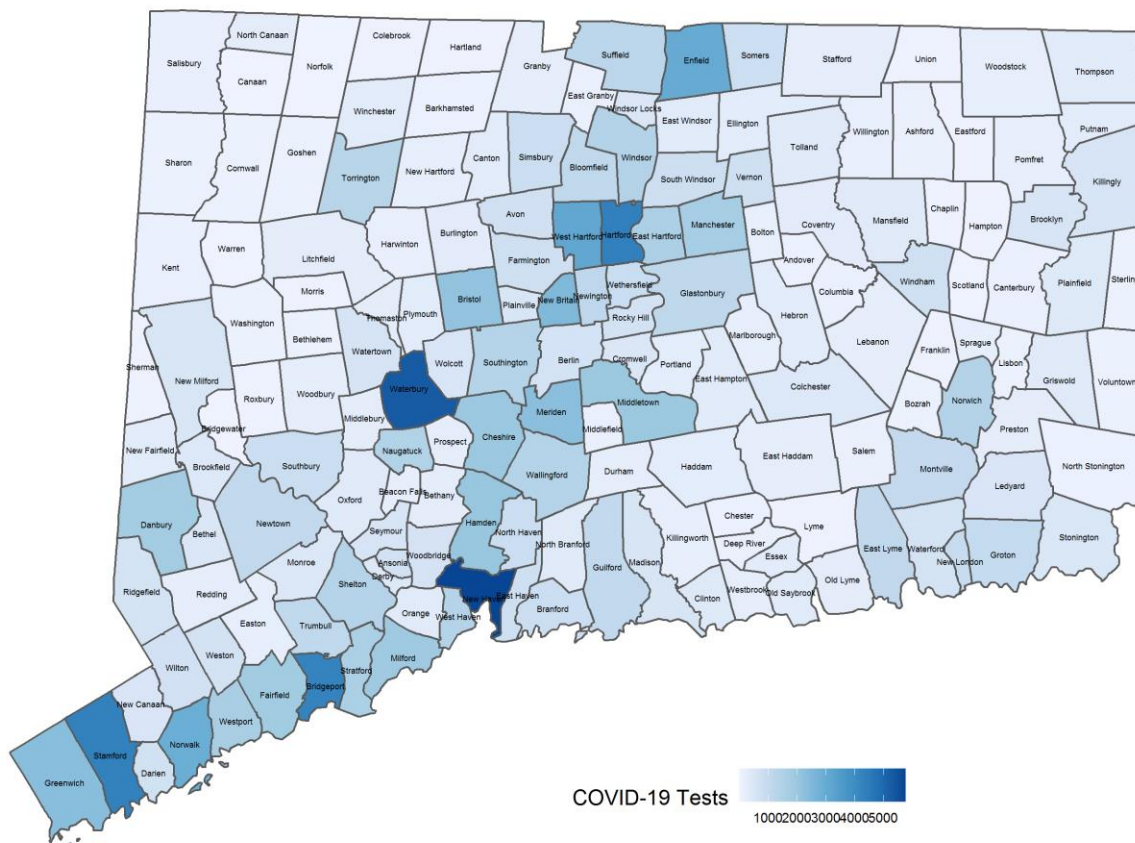

- B.1.1.529 includes B.1.1.529, BA.1, BA.1.1, BA.3, BA.4, BA.5, and their sublineages
- BA.2 includes BA.2 and all sublineages except BA.2.12.1
- BA.2.12.1 includes BA.2.12.1

## COVID-19 Molecular and Antigen Tests during May 22, 2022 - June 04, 2022

Among 130,522 molecular and antigen tests for COVID-19 with specimen collection date during May 22, 2022 - June 04, 2022, 124,235 (95%) tests were conducted among people who did not reside in congregate settings (including nursing homes, assisted living, and correctional facilities). Of these 124,235 tests, 15,261 (12%) were positive. The map below shows the number of molecular and antigen COVID-19 tests by town with specimen collection date during May 22, 2022 - June 04, 2022 that were conducted among community residents.

Number of Molecular and Antigen Tests for COVID-19 among People Living in Community Settings by Town with Specimen Collection Date During May 22 - June 04

*Map does not include tests pending address validation*

**Age Distribution of COVID-19 Cases with Specimen Collection or Onset  
During May 22, 2022 - June 04, 2022**

## Average Daily Incidence by Age Group

The chart below shows the average number of new COVID-19 cases per day per 100,000 population by age group. The rates in this chart are calculated by averaging the number of new cases diagnosed each day during the previous two weeks, dividing by the annual population in each age group, and then multiplying by 100,000.

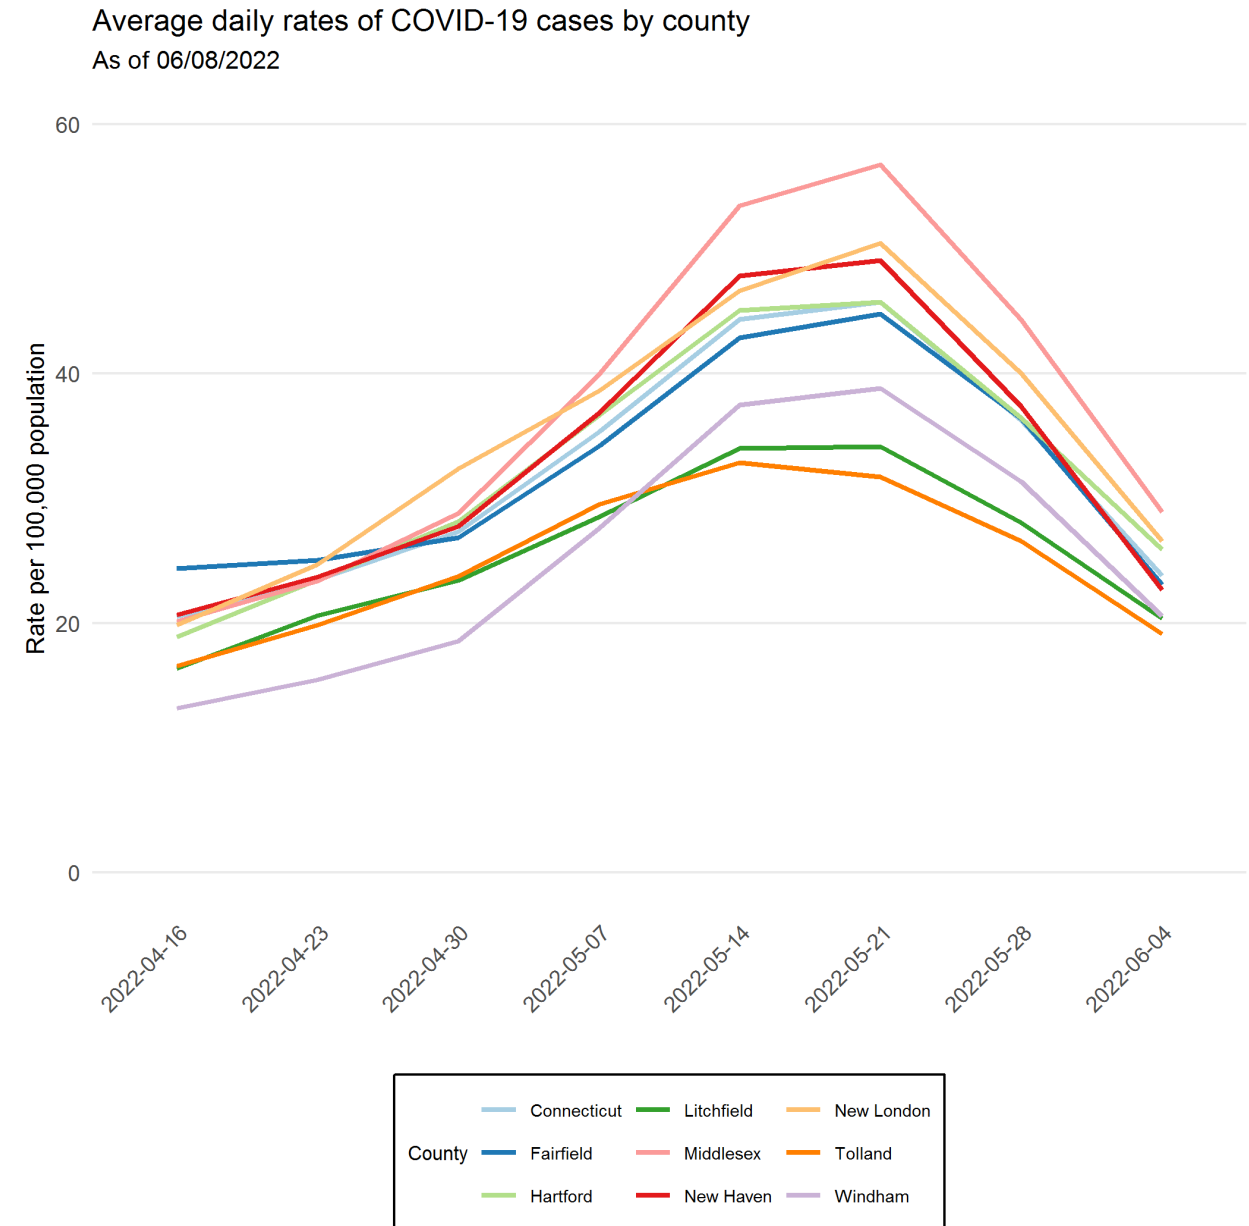

### Average daily rate of COVID-19 cases by age group

As of 06/08/2022

## Average Daily Incidence by County

The chart below shows the average number of new COVID-19 cases per day per 100,000 population in the state of Connecticut and for each Connecticut county. The rates in this chart are calculated by averaging the number of new cases diagnosed each day during the previous two weeks, dividing by the annual estimated population, and then multiplying by 100,000.

## Cumulative Number of COVID-19 Cases and COVID-19-Associated Deaths by Date

Test results may be reported several days after the result. Data are incomplete for most recent dates shaded in grey. Data from previous dates are routinely updated.

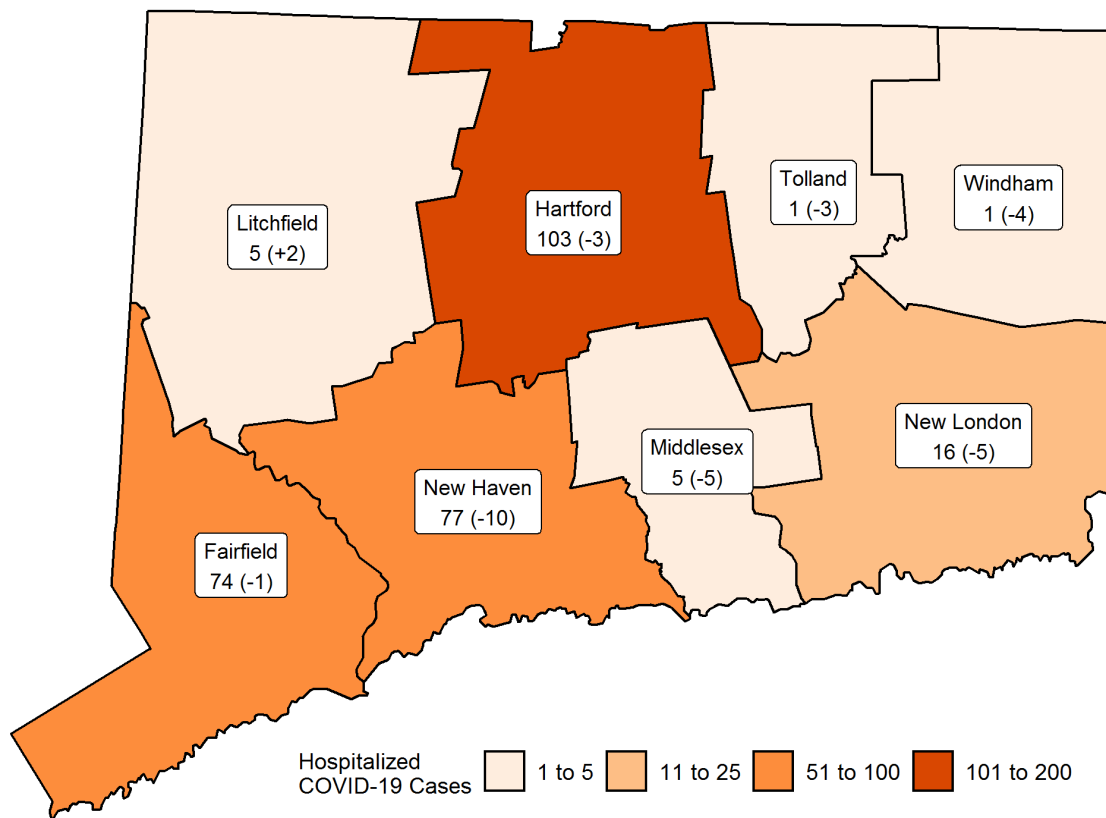

## Hospitalization Surveillance

The map below shows the number of patients currently hospitalized with laboratory-confirmed COVID-19 by county based on data collected by the Connecticut Hospital Association. The distribution is by location of hospital, not patient residence. The labels indicate the number of patients currently hospitalized with the change from 7 days ago in parentheses.

### Patients Currently Hospitalized by Connecticut County

*Distribution by location of hospital not patient residence. Data from the Connecticut Hospital Association.*

More information about hospitalized cases of COVID-19 in New Haven and Middlesex Counties is available from [COVID-NET](#).

## COVID-19 Hospital Census in Connecticut

The chart below shows the COVID-19 hospital census, which is the number of patients currently hospitalized with laboratory-confirmed COVID-19 on each day. Data were collected by the Connecticut Hospital Association and are shown since August 1, 2020

## COVID-19 Admissions

The chart below shows the average daily rate of hospital admissions with laboratory-confirmed COVID-19 by age group. The data used to create this plot were gathered from HHS Protect. More information on [HHS Protect data can be found here](#).

### Average daily COVID-19 hospital admission rate per 100,000, Connecticut

Data from HHS Protect

## Laboratory Surveillance

### Molecular Tests

To date, DPH has received reports on a total of 14,613,247 molecular COVID-19 laboratory tests; of these 14,469,075 test results were received via electronic laboratory reporting (ELR) methods from commercial laboratories, hospital laboratories, and the Dr. Katherine A. Kelley State Public Health Laboratory. The chart below shows the number of tests reported via ELR by date of specimen collection and test result.

*Test results may be reported several days after specimen collection. Data are incomplete for most recent dates shaded in grey. Data for previous dates are routinely updated.*

*Testing of recently collected specimens is ongoing and does not reflect a decrease in testing. Chart only includes test results received by electronic laboratory reporting.*

*ELR = Electronic Laboratory Reporting*

## Characteristics of COVID-19 Cases and Associated Deaths

Counts may not add up to total case count because demographic data may be missing.

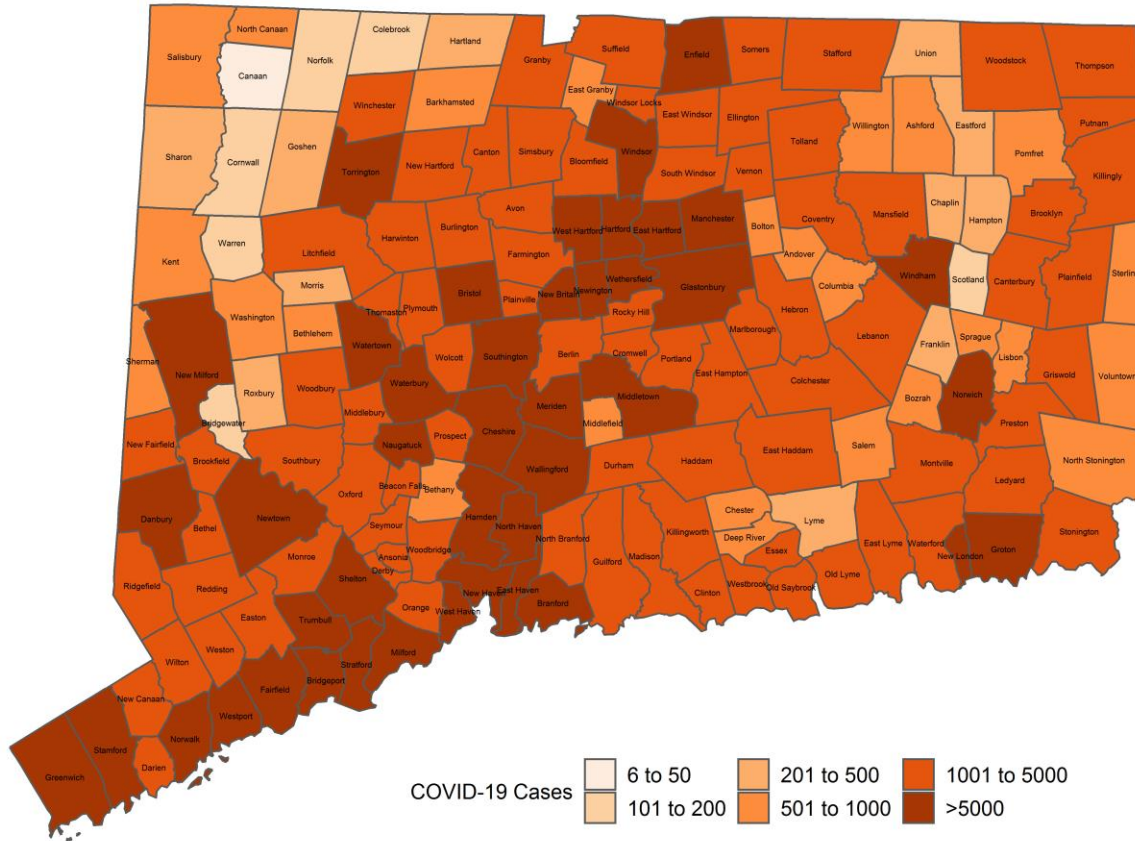

Counts may not add up to total case count because demographic data may be missing.

## Cumulative Number of COVID-19 Cases by Town

Map does not include 2568 cases pending address validation

All data are preliminary and subject to change.

**APPENDIX B.** The following graphs show the number of cases and deaths by race and ethnicity. Categories are mutually exclusive. The category “multiracial” includes people who answered ‘yes’ to more than one race category. NH=Non-Hispanic

The following graphs show the number of COVID-19 cases and COVID-19-associated deaths per 100,000 population by race and ethnicity. Crude rates represent the total cases or deaths per 100,000 people. Age-adjusted rates consider the age of the person at diagnosis or death when estimating the rate and use a standardized population to provide a fair comparison between population groups with different age distributions. Age-adjustment is important in Connecticut as the median age of among the non-Hispanic white population is 47 years, whereas it is 34 years among non-Hispanic blacks, and 29 years among Hispanics. Because most non-Hispanic white residents who died were over 75 years of age, the age-adjusted rates are lower than the unadjusted rates. In contrast, Hispanic residents who died tend to be younger than 75 years of age which results in higher age-adjusted rates.

The 2020 Connecticut and 2000 US Standard Million populations were used for age adjustment; population estimates from: [DPH Population Statistics](#). Categories are mutually exclusive. Cases missing data on race/ethnicity are excluded from calculation of rates. NH=Non-Hispanic

\*Age adjusted rates only calculated for groups with at least 30 deaths
